MUNEERAH AHMED ALAHAIDEEB

Cybersecurity Graduate | Offensive Security & Application Security | Aspiring Penetration Tester

Riyadh, KSA | AmuneerahA@gmail.com | +966 55 147 4957 | linkedin.com/in/muneerah-alahaideeb | muneerah12.github.io/MuneerahAhmed

PROFESSIONAL SUMMARY

CompTIA Security+ certified cybersecurity graduate who works both sides of the fight: hands-on offensive testing of web, Android, and network targets, backed by SOC, SIEM, and vulnerability management experience from a **Zain KSA** internship and intensive bootcamp training with **Kaspersky Academy at Tuwaiq Academy**. Member of the **RASED** team, awarded **2nd place at the Riyadh Expo 2030 Challenge**, where I built the IoT/OT cyber-physical layer, its backend, and sensor-data integrity controls. Seeking a **Red Team, Purple Team, or Junior Penetration Tester** role.

PROFESSIONAL EXPERIENCE

Zain KSA — Cybersecurity Specialist Intern (Cooperative Training), Riyadh Sep 2024 – Mar 2025

- **SOC Operations:** Monitored security logs and ran advanced searches in Elastic SIEM; managed SOC tickets and generated reports.
- **Vulnerability Management:** Conducted vulnerability assessments and produced detailed reports to support risk mitigation.
- **GRC & Auditing:** Served as Auditing Champion for internal GRC audits against NCA ECC and CCC.
- **Cloud Security:** Managed and secured Alibaba Cloud IaaS and SaaS environments.

Kaspersky Academy × Tuwaiq Academy — Cybersecurity Solutions & Analytics Bootcamp, Riyadh Completed Oct 2026

- Selected for an intensive, full-time technical bootcamp delivered by **Kaspersky Academy**, hosted at Tuwaiq Academy as the region's first Kaspersky Academy; completed the program and passed its final technical assessment.
- Trained hands-on on enterprise security solutions and security analytics in realistic SOC lab scenarios: threat detection, event monitoring and correlation, alert triage, and incident investigation and response.

Tuwaiq Academy — Cybercrime & Network Forensics Bootcamp, RiyadhJul 2025

- Investigated network-based incidents through packet capture and traffic analysis, reconstructing attacker activity and timelines, handling digital evidence, and reporting forensic findings.

SELECTED TECHNICAL PROJECTS & ACHIEVEMENTS

RASED — AI Crowd Safety & Intelligent Response Platform | 2nd Place, Riyadh Expo 2030 ChallengeOct 2026

Team-built: YOLO, VideoMAE, and AST models detect crowding, weapons, falls, fire, and gunshots from live camera and audio feeds; FastAPI backend, React dashboard, Telegram alerts. My focus: the CPS / IoT-OT layer.

- Built the CPS node: **ESP32** reading a **BME280** over I²C and driving 12V ventilation fans via a relay on a temperature threshold.
- Built the CPS backend and logic in **Python/FastAPI** with SQLAlchemy/SQLite: REST APIs for readings, heartbeats, and node management, surfaced in the platform dashboard.
- Protected reading integrity against fabricated or modified data: per-node credentials stored as hashes, requests bound to node identity over TLS, heartbeat/last-seen tracking, and cross-node validation.
- Added offline resilience: nodes buffer readings during network loss and forward them on reconnect (store-and-forward).

VaultBank — Android Application Security Assessment | Hands-on lab2026

- Static and dynamic analysis of a deliberately vulnerable Android banking app using the Emulator, ADB, and JADX.
- Exploited an exported Activity found in AndroidManifest.xml; uncovered hardcoded credentials, insecure SharedPreferences storage, and tokens leaked in logcat; documented findings with remediation.

Web Application Penetration Testing | PortSwigger Web Security Academy & OWASP Juice Shop labs2026

- **PortSwigger:** Used Burp Proxy, Repeater, and Intruder to exploit IDOR, HTTP method-based authorization bypass, flawed multi-step processes, X-Original-URL and Referer-based access control, and username enumeration.
- **OWASP Juice Shop:** Discovered admin routes, exploited broken access control and IDOR, and tested deprecated interfaces and XML upload handling.

Network Attack & Traffic Analysis | Hands-on labs2025 – 2026

- Ran Nmap recon and ARP spoofing, DNS spoofing, and DHCP attacks in isolated labs, then investigated incidents from the traffic in Wireshark and reported findings.

Bank Shield — AI Pre-Login Fraud & SIM Swap Detection | In developmentMay 2026 – Present

- Pre-login behavioral and contextual risk scoring that detects account takeover (ATO) and SIM-swap attempts before authentication.

Smart Cyber-Physical Wick Hydroponic System | Arduino Uno, ESP8266, Blynk2024

TECHNICAL SKILLS

- **Offensive Testing:** OWASP Top 10, broken access control & IDOR, authorization bypass, authentication testing, HTTP request tampering, Android static/dynamic analysis, network recon, ARP/DNS spoofing, DHCP attacks
- **Tools:** Burp Suite (Proxy, Repeater, Intruder), Nmap, Wireshark, Metasploit, Gobuster, ADB, JADX, Android Studio Emulator
- **Defense & Detection:** Elastic SIEM, log analysis, SOC ticketing, vulnerability assessment, MITRE ATT&CK, NIST CSF, ISO/IEC 27001, NCA ECC/CCC
- **Engineering:** Python, FastAPI, SQLAlchemy, REST APIs, SQL, Java, JavaScript, PHP, C, C#, Kotlin | ESP32, ESP8266, BME280, I²C/GPIO, PlatformIO | Alibaba Cloud, AWS fundamentals, Linux, Windows Server, TCP/IP, TLS

EDUCATION

B.S. Information Systems, Cybersecurity Track — Prince Sultan University, Riyadh2025

Relevant coursework: Penetration Testing & Ethical Hacking, Cyber-Physical System Security

CERTIFICATIONS & TRAINING

Certification: CompTIA Security+ (Nov 2024)

Learning paths & courses: TryHackMe Jr Penetration Tester (in progress); AWS Cloud Practitioner Essentials (Jun 2026); Linux Fundamentals (2024)
